Notre service technique est  
à votre écoute aux numéros  
qui sont au dos de cette  
notice d'installation

## CONSIGNES DE SECURITE ELECTRIQUES

Pour bien installer votre cabine de douche chez vous, vous devez respecter quelques règles :

- l'installation électrique doit être réalisée par un électricien qualifié. Cette installation doit être conforme à la norme NF C 15-100 en vigueur ;
- prévoyez une alimentation électrique indépendante monophasée avec terre 230 Volts-50 Hertz, protégée par un fusible approprié de 16 A (cf. Norme NF en vigueur). Prévoyez aussi un interrupteur différentiel ou un disjoncteur différentiel à courant différentiel résiduel (DDR) ayant un courant de déclenchement n'excédant pas 30 mA et exclusivement destiné à la cabine de douche, et de toute façon conforme aux exigences de la norme en vigueur à la date d'installation. Cette protection est à fournir par vos soins et doit être installée dans le volume 3 des volumes de protection, ou dans une autre pièce. Raccordez par l'intermédiaire du boîtier de connexion, les câbles d'alimentation de l'ensemble (type 3x2,5 mm<sup>2</sup> HO7 RNF fils de cuivre) non fournis ;
- les appareils de classe 1 doivent être raccordés de façon permanente aux installations électriques fixes. Les parties d'appareils comportant des composants électriques, à l'exception des dispositifs de commande à distance, doivent être placés ou fixés de façon telle qu'elles ne puissent pas tomber dans le receveur de douche ;
- prévoyez une protection IP55 pour le boîtier de raccordement de l'alimentation électrique ;
- il est nécessaire de relier les organes métalliques de votre produit au circuit équipotentiel de votre installation ;
- si la tuyauterie d'écoulement du vidage est en cuivre, raccordez celle-ci au conducteur de liaison équipotentielle de la salle de bain par l'intermédiaire d'un collier

## **SAFETY RECOMMENDATIONS:**

- To install your recycling shower cubicle correctly in your home, you must follow certain rules :
- the electrical installation must be carried out by a qualified electrician. This installation must comply with standard IEC 64-B in force on the date of installation or the national installation standard in force\* ;
- provide an independent single-phase earthed 230 V / 50 Hz power supply protected by an appropriate 16 A fuse (see existing NF standard)Provide also a differential switch or a differential circuit-breaker with residual differential current (DDR) which has a breaking current not exceeding 30 mA, and in any event complying with the requirements of the standard in force on the date of installation. This protection is to be provided by you and must be installed in volume 3 of the protective volumes. Use the connection box to connect the power supply cables of the assembly (type 3x1,5 mm<sup>2</sup> HO7 RNF copper wires) not supplied\* ;
- the class I equipment must be connected permanently to the fixed electrical installations. Equipment parts comprising electrical components, with the exception of remote control devices, must be positioned or secured in such a way that they cannot fall into the shower basin\* ;
- if the drainage outflow pipe is made of copper, connect it to the bathroom's equipotential bonding conductor via a ring.

## **ASSEMBLY RECOMMENDATIONS:**

- The total height of your cubicle is 210 cm; it is therefore imperative to have a ceiling height of at least 250 cm in order to have enough room to handle tools during attachment to the wall ;
  - the hot water inlet and cold water inlet connection is made by means of a 15/21 (1/2") 80 cm hose ;
  - provide an electrical cable approximately 80 cm long (cable with three conductors with nominal section greater than 1.5 mm<sup>2</sup>)\* ;
  - the external outlet of your shower basin must be a flexible pipe with a diameter of 40 mm, to prevent the transmission of vibrations ;
  - all preparation of the floor and walls (paint, ceramics, tiling, etc.) must be completed before starting to assemble your cubicle.
- ATTENTION: If your water is hard, we strongly recommend the installation of a softener water to preserve the hammam function.**

\*Cubicle with hammam

## **VEILIGHEIDSAADVIJES:**

- Om uw waterbesparende douchecabine thuis goed te kunnen installeren moet u enkele regels naleven:
- de elektrische installatie moet door een erkend elektricien worden uitgevoerd. Deze installatie moet conform zijn met de CEI 64-8 norm geldig op installatiedatum, of met de geldende nationale installatienorm\* ;
  - voorzie een onafhankelijke, monofasige elektrische voeding van 230 Volt 50 Hertz met aarding, beschermd door een geschikte zekering van 16 A (cfr. de geldende NF-norm). Voorzie ook een differentiaalverschakelaar of een differentiaalonderbreker op differentiale reststroom met een schakelvermogen onder 30 mA, conform de geldende norm op de installatiedatum. U moet deze zekering zelf plaatsen buiten de natte zone. Sluit de voedingskabels voor het geheel (type 3 x 1,5 mm<sup>2</sup> HO7 RNF koperdraad) aan via een verbindingsdoos (niet meegeleverd)\* ;
  - de Klasse I-toestellen moeten permanent worden aangesloten op een vaste elektrische installatie. De toestel delen met elektrische onderdelen, uitgezonderd de afstandsbediening, moeten zo worden geïnstalleerd of verankerd dat ze niet in de douchebak kunnen vallen\* ;
  - sluit een koperen afvoerleiding (indien gebruikt) met een klem aan op de equipotentiaalverbinding van de badkamer.

## **MONTAGE-INSTRUCTIES:**

- De totale hoogte van uw cabine bedraagt 210 cm. De minimale hoogte onder plafond is bijgevolg 250 cm, zodat er voldoende ruimte is om het gereedschap te hanteren bij de plaatsing tegen de muur ;
  - de warm- en koudwatertoevoer worden met een slang aangesloten 15/21 (1/2") van 80 cm ;
  - voorzie een elektriciteitsnoer van ongeveer 80 cm (kabel met drie geleiders, nominale doorsnede groter dan 1,5 mm<sup>2</sup>) ;
  - de externe afvoer van de doucheleiding bestaat uit een soepele leiding van Ø 40 mm, zodat trillingen bij overdracht worden vermeden ;
  - voor u met de montage van de cabine begint moet u de vloer en de muren voorbereiden (verf, aardewerk, tegels, ...).
- AANDACHT: Indien het water in uw badkamer kalkrijk is, bevelen wij ten sterkste een waterontharder aan om de stoomfunctie in goede conditie te behouden.**

\* cabine hammam

## CONSEJOS DE SEGURIDAD:

Para la correcta instalación de su cabina de ducha de hidromasaje/baño-vapor en casa debe respetar algunas normas :

- la instalación eléctrica deberá realizarla un electricista cualificado. La instalación deberá ser conforme a la norma CEI 64-8 vigente en la fecha de instalación o a la norma de instalación nacional vigente\* ;
- deberá preverse una instalación eléctrica independiente monofásica con toma de tierra de 230 voltios - 50 hertzos protegida por un fusible apropiado de 16A. Prevea también un interruptor diferencial o un disyuntor diferencial de corriente diferencial residual (DDR) con una corriente de accionamiento que no supere los 30mA, y que en cualquier caso respete las exigencias de la norma vigente en la fecha de la instalación. Esa protección deberá ser aportada por su parte y deberá instalarse fuera de los volúmenes de protección. Conecte mediante la caja de conexión el conjunto de cables de alimentación (tipo 3x2,5 mm<sup>2</sup> HO7 RNF hilos de cobre) no incluido\* ;
- los aparatos de clase I deberán conectarse de forma permanente a las instalaciones eléctricas fijas. Las partes de aparatos que tengan componentes eléctricos, exceptuando los dispositivos de accionamiento a distancia, deben colocarse o fijarse de tal manera que no puedan caer en el plato de la ducha\* ;
- si la tubería de desagüe es de cobre, conéctela al conductor de conexión equipotencial del cuarto de baño mediante un collar.

## CONSEJOS DE MONTAJE:

- La altura total de su cabina es de 210 cm, por lo tanto, es imperativo contar con una altura bajo techo de 250 cm para disponer de suficiente espacio a la hora de utilizar las herramientas durante la fijación a la pared ;
- el desague de entrada de agua caliente y la de entrada de agua fría deberán realizarse con un flexible 15/21 (1/2") de 80 cm ;
- prevea un cable eléctrico de alrededor de 80 cm (cable de tres conductores, sección nominal superior a 2,5 mm<sup>2</sup>)\* ;
- el desague exterior de su plato deberá consistir en una tubería flexible de Ø40 mm para evitar la transmisión de vibraciones ;
- antes de empezar el montaje de su cabina deberá haber terminado la preparación del suelo y de las paredes (pintura, revestimiento, alcatado...)

**ATENCIÓN: Si el agua de su zona tiene mucha cal, le recomendamos que instale un descalcificador para preservar la función baño vapor**

MONTAGE A DROITE  
RIGHT HAND  
MONTAJE A LA DERECHA  
MONTAGE RECHTS

MONTAGE A GAUCHE  
LEFT HAND  
MONTAJE A LA IZQUIERDA  
MONTAGE LINKS

Vous avez la possibilité de réaliser un montage à droite ou un montage à gauche. Notre notice d'installation décrit un montage à droite. si vous voulez réaliser un montage à gauche, il vous suffit d'inverser le montage.

This cubicle can be installed either left or right hand. These installation instructions show a right hand installation.

Puede realizar un montaje a la derecha o un montaje a la izquierda. Nuestro folleto de instalación describe un montaje a la derecha. Si desea montar su cabina a la izquierda sólo tendrá que realizar el montaje al contrario.

U kunt de cabine rechts of links monteren. Onze handleiding beschrijft de rechtse montage van de cabine. Keer de montage om als u de cabine links wilt monteren.
